

Meluton Compressor Jacket

Let us introduce the Meluton Compressor Jacket - a simple and easy to attach solution, that maximizes the comfort your air heat pump produces, by making it silent.

Customized multilayer sandwich structure with sound barrier.
4 different layers of materials with different densities to enable the best possible noise control. Thickness 23 mm.

The Compressor Jacket is designed to be compatible with compressors using R-290 refrigerant. The materials withstand the requirements of R-290 environments and support the transition to more environmentally friendly refrigerants.

Optimised for:

- Compressor noise reduction, especially in heat pumps
- Convenient residual noise tonality
- Heat resistance
- Durability
- Installation efficiency (fast installation with velcro tapes)
- Including recycling based raw-materials
- Low cost
- Multiple refrigerants including R-290

Delivered as CNC cut installation-ready parts according to clients' specifications.
