

Noise? Less.

A short introduction to a company called Meluton.

We are the creators of the comfort zone.

Whether your aim is to adjust noise or heat in your solutions - we happen to know a thing or two about it.

Welcome to the comfort zone.

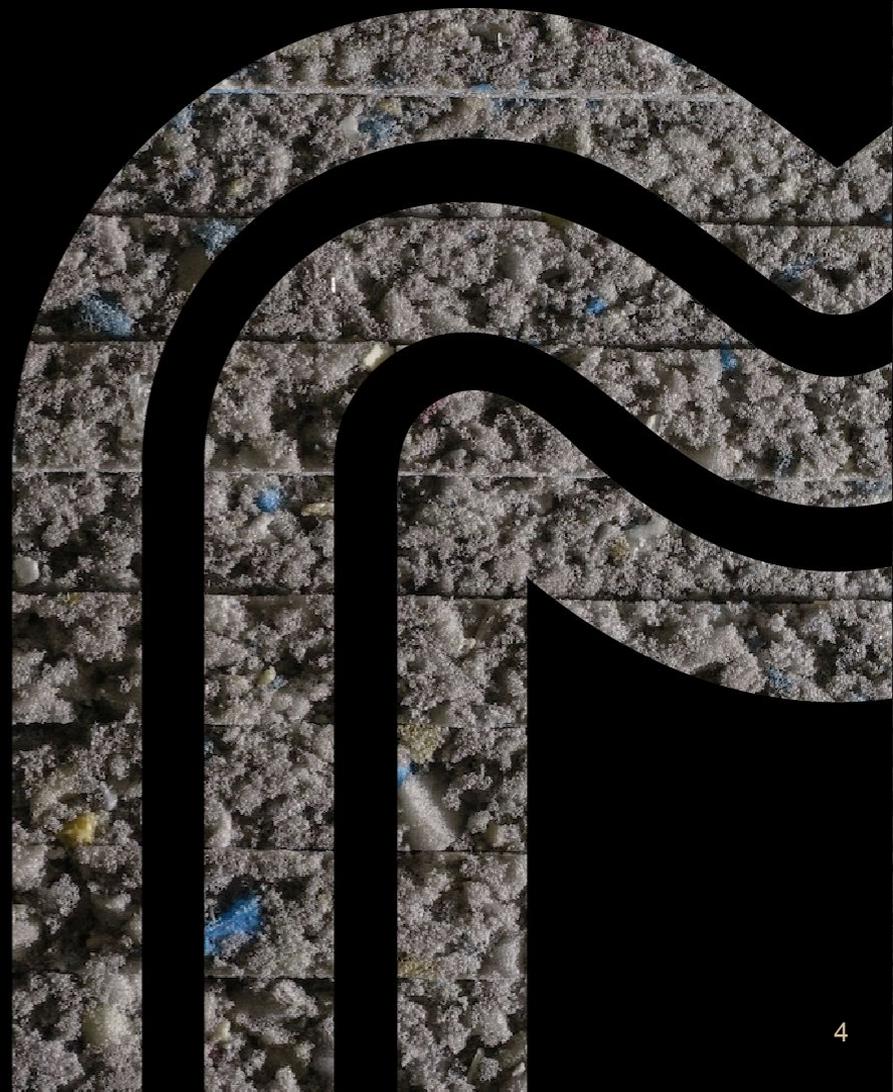

No material left behind.

We aim for a functioning circular economy.
Which means taking steps constantly
towards a world built with more sustainable
materials than before.

Whatever the material might be, we always
make the most of it with minimum waste.

And that is an upright promise right there.

Since 1977

Meluton was founded in a barn on the outskirts of Helsinki back in 1977.

The first flame lamination solutions were designed to reduce noise, so the company was named Meluton, meaning Noiseless in Finnish.

And that's still our soundproof promise of our noise control solutions.
